WORKS UPDATE

As we continue to make progress at our King George's Park site, we would like to notify you of some upcoming works.

In October we will start to insert sheet piles into the ground surrounding the central section of the combined sewer overflow (CSO) concrete pipe, prior to its removal.

Once the sheet piling is complete, we will start with the excavation works. This is for access and to remove the CSO pipe. Once excavated, we need to cut the CSO pipe into sections, which can be lifted out using our crane.

The CSO will continue to be used throughout the removal process. Therefore, we will be required to continue with the works until we have completely removed the sections of CSO pipe and installed new rocker pipes. This will connect onto our existing Flume, thereby sealing the CSO again.

As agreed with London Borough of Wandsworth, the work will be carried out within 2.5 weeks working 24 hours. These works are subject to good weather and tidal conditions. In the event of any changes we will notify local residents.

In addition, when we have completed the CSO works, we will then start with further piling works to extend the existing cofferdam area, which will allow for the construction of the additional underground structures.

We do not anticipate these works to be intrusive and though some noise is expected through the piling works, we endeavour to keep noise to a minimum through careful management arrangements.

If you feel affected by Tideway's work, you can contact Tideway's Helpdesk and ask to speak to your local Mitigation and Compensation Lead, who will be able to advise you on the Independent Compensation Panel (ICP).

KEY INFO

Duration of work

- **Early October:** Installation of sheet piling near CSO location
- **Mid October:** Excavation & removal of CSO pipe and Rocker Pipe installation – 2.5 weeks to be complete over 24 hours per day
- **End of October:** Piling works to extend current cofferdam area
- One hour start up and shut down periods either side of these working hours

What to expect

- We will be bringing in plant and equipment
- 24 hours work over a 2.5 week period
- Some noise expected during piling works

What will we do

- We will monitor dust and noise levels
- Best practical means to minimise noise
