# RECONNECTING LONDON WITH THE RIVER THAMES

*If a career in construction has never  
crossed your mind, then think again...*

# WE ARE THE COMPANY THAT IS BUILDING A 25KM 'SUPER SEWER' BENEATH THE RIVER THAMES.

London relies on a 150-year-old network of brickwork sewers, and it needs updating. Built for four million people, the system is struggling to cope with a population more than double that size.

As a result, it often overflows, releasing millions of tonnes of raw sewage into the river each year.

To tackle this problem we are building a giant tunnel - the Thames Tideway Tunnel - from west to east, to divert that sewage and transport it directly to a treatment plant in east London.

The project is creating significant opportunities across the capital, boosting local employment and prosperity.

About 4,000 direct, sustainable jobs will be created on the project during peak construction in 2019 – and we have committed that a quarter of those jobs will go to residents from the 14 boroughs along the tunnel's route.

As well as technical skilled roles, we will also be looking to recruit many different entry level roles including:

## **Construction roles:**

- Traffic marshalls
- General operatives
- Slings signallers
- Steel fixers
- Form workers
- Tunnelling operatives
- Plant operators
- Ganger/supervisor
- Foreman

## **Non-Construction roles:**

- Site cleaners
- Administrators
- Document controllers
- Security staff

Out of these, 1 in 50 jobs will be an apprenticeship in:

- General operatives
- Business administration
- Construction electricians
- Tunnelling
- Civil engineers
- Quantity surveying
